

Junior Software Developer at IGNITE by FORVIA HELLA w/m/d

all-remote, global

Join the Future of Software – with IGNITE by FORVIA HELLA

We are looking for tech visionaries who want to rethink software development.

Are you ready to shape the next generation of mobility?

Do you have a passion for technology and a desire to work on groundbreaking projects?

Then IGNITE by FORVIA HELLA is the place for you!

We are an agile team that develops and distributes software solutions. Our core competence lies in the development of software products that are directly integrated into vehicle systems or that are usable in the development environment of industrial sectors. But we go even further: with the latest technologies such as machine learning and cloud computing, we take our software products to the next level, creating solutions that go beyond traditional approaches. Sounds exciting? Keep reading!

What you can look forward to

→ **Entrepreneurial Thinking:** we are looking for people who think outside the box and act like entrepreneurs. With us, you have the freedom to contribute ideas and actively shape projects.

→ **Passion for the Work:** there's no boredom here – we love what we do and thrive in a dynamic work environment where you can fully express your passion for embedded software and advanced technologies, while having fun with it!

→ **State-of-the-Art Technologies:** all our projects revolve around software, and modern approaches like artificial intelligence, machine learning, and cloud technologies also play a big role. You will have the chance to experiment in various fields and actively shape the future of vehicle and industrial technology.

→ **Flexibility:** shape your workday with your global team, fully remote.

Junior Software Developer at IGNITE by FORVIA HELLA w/m/d

all-remote, global

What you should bring

- **Curiosity and Enthusiasm for Technology:** you want to not just watch but actively shape the future.
- **Entrepreneurial Mindset:** you think like a doer, take on challenges independently, and love taking responsibility.
- **Team Spirit:** in our projects, you will work with a motivated and dynamic team that strives to achieve great things together.
- **Interest in Innovation:** you don't stand still but actively drive technological advancements forward.

What awaits you

- You will develop and implement embedded software solutions together with our product teams, based on technical specifications and requirements.
- Your focus will be on writing clean, maintainable code and learning/sharing best practices, ensuring the integration and functionality of our products (Zonal, HPC, Cloud).
- You will contribute to bringing our software products to production, focusing on developing reliable and performing solutions.
- You will participate in code reviews and best practices.
- You contribute to the development of new product ideas and determine market opportunities.
- For one of our projects, you will support the development of solutions to interpret and process traffic rules.

Can't identify with this role? No problem, convince us of your skills and personality, and get in touch.
